PROFESSIONAL SUMMARY

Product Designer specializing in decision-driven interaction systems and human-AI workflows. Translates complex user behavior into structured information architectures and multi-state interaction models that reduce cognitive load and align user goals with measurable product outcomes. Combines UX research rigor with systems-level product thinking — from decision journey mapping to interaction logic definition — to design experiences that transform complexity into clarity.

CORE COMPETENCIES

Product Design: End-to-end product design, interaction design, wireframing, prototyping, information architecture, user flows, decision-system design, multi-state interaction modeling

UX Research: User interviews, usability testing, heuristic evaluation, journey mapping, scenario analysis, competitive analysis, affinity mapping

Design Methodology: Human-centered design, decision-driven design, human-AI collaboration design, problem framing and validation, PRD documentation

Tools: Figma, FigJam, Miro, Notion

Technical: Python (data analysis, qualitative and quantitative methods), requirement analysis, Agile/sprint workflows

FEATURED PROJECT

SafeNav — Decision-Driven Travel Planning System

Jul 2024 – Jan 2025

Tools: Figma, FigJam, Miro, Notion

- Reframed the core product thesis from navigation to decision-making — defined a continuous 4-stage interaction loop (Explore → Contextualize → Plan → Navigate) grounded in research on how users evaluate, commit to, and execute travel decisions.
- Designed a unified map-centric interaction model where the map surface dynamically shifts roles across all 4 stages, consolidating a fragmented 5-app workflow into a single surface and eliminating cross-tool mental state transfer.
- Engineered a time-sensitive decision layer surfacing safety signals, transport options, and scheduling constraints inline at the point of decision — enabling users to evaluate destination, timing, and route safety simultaneously across multi-stop itineraries.
- Produced a complete design system and high-fidelity prototype covering 20+ interaction states, edge cases, and real-time data integration patterns for safety-critical travel contexts.

EXPERIENCE

UI/UX Designer — Intern

Jun 2024 – Jan 2025

Sure Trust · Remote

- Led end-to-end UX delivery across 6+ sprint cycles: scoped research plans, conducted user interviews and heuristic evaluations, defined information architecture, produced wireframes and interactive prototypes, and authored PRD documentation for engineering handoff.
- Redesigned 3 core user flows by identifying friction through usability testing and journey mapping — reducing task completion steps and clarifying decision points based on direct user feedback.
- Collaborated with product and engineering stakeholders to translate research findings into actionable design specifications, ensuring implementation fidelity and alignment with product goals.

- Identified and documented critical usability issues via heuristic evaluation, prioritizing by severity and business impact to focus sprint scope on highest-value improvements.

EDUCATION

B.Tech — Computer Science & Engineering (Data Science) *Aug 2023 – May 2027 (Expected)*

SRM Institute of Science and Technology, Kattankulathur · CGPA: 7.85 / 10.0

Relevant Coursework: Human-Computer Interaction, Machine Learning, Software Engineering, Probability & Statistics

CERTIFICATIONS

User Experience Design Fundamentals *Nov 2024*

IBM SkillsBuild

Digital Skills: User Experience *Feb 2024*
